Book summary of visual c++ programming, kanetkar visual c++ and microsoft foundation class (mfc) library are the tools of choice for professional windows programmer. This book makes vc++ and mfc programming easier by using a novel approach. It doesnt use appwizard and class wizard to write vc++ programs since these wizards generate a lot of code which can do lots of things when all that you want is a plain simple window . And thats what any programmer would like to get in his first program when he is learning windows programming. The whole idea of this book is to make you understand how things work under the hood rather than teaching you which buttons to click while using the wizards.
